**FOR IMMEDIATE RELEASE**

## **Viatronix V3D<sup>®</sup>-Colon software exclusively used in another important clinical trial on CT Colonography**

**New Study investigated precancerous polyp growth in patients over time. It provides invaluable data on the growth and regression of small polyps**

Stony Brook, NY, June 11, 2013. [Viatronix Incorporated](#) announced today that its dedicated CT Colonography (CTC) software—V3D-Colon was exclusively used in another important clinical study relating to colorectal cancer screening. The latest CTC study, “Assessment of volumetric growth rates of small colorectal polyps with CT colonography: a longitudinal study of natural history” (Lancet Oncology, online June 7, 2013), tracked polyp growth in 243 patients over an eight year period.

For the first time there is direct evidence and statistical proof that colorectal polyp-volume growth over time delivers true clinical value for identifying advanced adenomas. The advanced adenoma polyp is the primary target in colorectal cancer screening. When an advanced adenoma polyp is identified and removed the likelihood of colorectal cancer developing is significantly reduced.

“Viatronix is extremely proud to have been an integral part of such an important trial” said Zaffar Hayat, President and CEO of Viatronix Incorporated. He went on to say "the Viatronix platform has been the software of choice in several landmark clinical trials over the past ten years. V3D-Colon’s user friendly interface, diagnostic tools and short read times backed by strong clinical validation make it the system of choice for leading experts."

This study once again proves CTC is effective for colon cancer screening.

Screening CTC is currently reimbursed by many insurance carriers and coverage is mandated in approximately 30 States. Presently there is legislation in Congress for CMS/Medicare to cover the cost for this invaluable colorectal cancer screening exam.

### **About Viatronix**

Viatronix, Inc. located in Stony Brook, New York, U.S.A. is a leading innovator of non-invasive 2D/3D medical imaging and diagnostic software that enables physicians to interactively view vital organs and anatomical structures within the human body. The Company’s V3D<sup>®</sup> technology software solutions include Viatronix V3D-Colon, V3D-Cardiac, V3D-Vascular, V3D-Calcium Scoring, and V3D-Explorer.,
